

Measurements and Details

Sketch the area to be designed on the graph below. Exact measurements are important so we know precisely how much room we have to work with. We can then plan your landscape to scale. Please include all details such as walkways, windows and how far they are from the ground, the location of water faucets, vents, meters, A/C units, etc. Also, be sure to indicate any existing plants that you would like to keep in the landscape. The more information you give us, the easier it will be to create your beautiful new landscape.

Scale: _____ ft. x _____ ft.
